www.eazyclad.com

Eazyclad Thin brick Slips for cladding are also known as slim brick tiles are a precast light weight eco friendly product that uses 60% recycled material that would otherwise have ended up in landfill. They offer architects and builders the flexibility to combine traditional materials with the versatility and cost reductions of a cast product. We produce Eazyclad Thin brick slips in the UK with our own specially developed mould's which enable us to get away from the old problem of limited brick choice which very often resulted in a overly-uniformed straight edge appearance, we can also colour match nearly any brick ever produced that offers the texture and colours of Traditional Bricks.

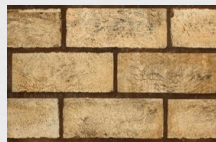

Eazyclad Thin Brick Slips give the look, benefit and appearance of traditional hand laid bricks but with the advantages of speed, durability and all the cost savings. *Suitable for External or Internal Uses*
